Kacper **Kamiński**

DevOps Engineer · AWS Infrastructure · CI/CD

Warsaw, Poland

kacper@kaminskidev.com | kaminskidev.com | perkam | kaminski-kacper

Core Skills

Cloud & IaC: AWS, Linux, Terraform, Terragrunt, Ansible, Packer, Kubernetes (Rancher; k3s homelab)
CI/CD & Observability: Jenkins, Job DSL, GitHub Actions, CloudWatch, Prometheus, Grafana
Automation: Bash, Ruby, Groovy

Education

B.Eng. Computer Science
Warsaw University of Technology
2015–2019

Experience

Sensor Tower

Warsaw, Remote

DevOps Engineer

Aug. 2022 – 2026

- **Built and maintained** an **AI article-publishing platform** for 2 years, expanding article types and monitoring job health and search performance; published **1M+ articles** that matched or exceeded the site's pre-existing organic content in Google Search impressions and clicks.
- **Led the relocation and rebuild** of a **bare-metal iPhone analysis lab** in Equinix Warsaw, restoring the reverse-engineering team's ability to improve **SDK detection data quality, accuracy, and coverage**.
- **Maintained and improved internal developer tooling** across **Linux/macOS and x86/ARM**, extending cross-platform setup and controlled access to production data and nodes for queries and automation. Introduced an **internal Homebrew repository** that simplified installation and updates of common CLIs and scripts.
- **Made critical Jenkins automation safer to change** by bringing **400 CI/CD and data jobs** under version control and automatically flagging manual edits. Built an **AI-assisted migration workflow** that generated, normalized, and validated definitions against live jobs.
- **Cut full-pipeline runtime by 20%+** and strengthened **CI debugging and deployment safety** with stage-level telemetry, flaky-test tracking, worker-resource monitoring, and regression alerts.
- **Modernized Jenkins master and runner infrastructure** through OS, architecture, and dependency upgrades, including runner migration from **Amazon Linux 2/x86_64 to Ubuntu/ARM**; rolled out master and worker changes without interrupting critical CI/CD and data workloads.

Equinix

Warsaw

DevOps Engineer

Nov. 2020 – Jul. 2022

- **Automated microservice bootstrapping** by building an internal CLI with the backend team, designing a reusable service template, and connecting it to a parameterized Jenkins pipeline so new services could follow a consistent build and deployment process.
- **Built and operated self-hosted GitHub Actions runners** on Rancher-managed Kubernetes across **on-premises and AWS clusters**, monitoring runner health, troubleshooting workflow issues, and configuring access to services such as Vault, Artifactory, and AWS-hosted resources.
- **Supported the company-wide Jenkins-to-GitHub Actions migration**, working directly with critical software teams such as DCIM to plan work, implement required automation, and resolve access or dependency issues so their workflows could build and deploy on the new platform.
- **Created reusable GitHub Actions** for common Java setup, Vault secret access, and Artifactory package retrieval, and documented shared workflows to help teams adopt them; the repository became the **most-starred in the GitHub organization**.
- **Tech stack: Terraform, Terragrunt, AWS, Kubernetes, Java, Python, Argo CD**

Lingaro

Warsaw

Backend Developer / Data Engineer

Mar. 2019 – Jul. 2020

- **Sole implementer and client technical contact** for a Smart City proof of concept at one of Poland's largest power companies; co-designed the architecture and built a **Spring Boot backend** with ETL pipelines for street lighting, smart bins, and air-quality sensors, consolidating their data in SQL Server behind a **unified API for client access**.
- **Built Spark ETL pipelines** for commerce data from a large Philippine supermarket chain, making the data available for the data science team's project work.
- **Integrated Google Ads and Facebook Marketing APIs** with custom data connectors, enabling project teams to consume marketing data.
- **Helped data science teams deploy ML models** by containerizing them and supporting their deployment.
- **Tech stack: Java, Kubernetes, Azure, MS SQL Server, Python, Spark, Hadoop**

Freelance

Warsaw

Backend Developer / Product Owner

Oct. 2018 – Jan. 2019

- Served as Product Owner in a **four-person team** delivering and supporting a production-ready truck GPS tracking product for a **30-person company**; defined use cases, coordinated stakeholders and providers, and managed delivery.
- **Tech stack: Go, DynamoDB, AWS**

TUiR Warta S.A. *Warsaw*

Java Developer *Jun. 2018 – Sep. 2018*

- Developed an application to process faulty insurance transactions and generate reports, reducing tester workload.
- **Tech stack: Java, VBA**
