Kacper **Kamiński**

DevOps Engineer · AWS Infrastructure · CI/CD

Warsaw, Poland

kacper@kaminskidev.com | kaminskidev.com | perkam | kaminski-kacper

Core Skills

Cloud & IaC: AWS, Linux, Terraform, Terragrunt, Ansible, Packer, Kubernetes (Rancher; k3s homelab)
CI/CD & Observability: Jenkins, Job DSL, GitHub Actions, CloudWatch, Prometheus, Grafana
Automation: Bash, Ruby, Groovy

Education

B.Eng. Computer Science
Warsaw University of Technology
2015–2019

Experience

Sensor Tower

Warsaw, Remote

DevOps Engineer

Aug. 2022 – 2026

- Designed, built, and maintained for approximately two years an **AI article-publishing platform** for the marketing blog; expanded it to support new article types and monitored both job health and article performance.
- Coordinated with **engineering and marketing stakeholders** on requirements and rollout; the platform published over **one million articles**, accounting for more than **half of marketing website visits from Google Search**, according to Google Search analytics.
- Owned the technical relocation and rebuild of a **bare-metal iPhone analysis lab** in Equinix Warsaw, covering hardware, ISP, networking, firewall, AWS connectivity, and Prometheus monitoring; restored the inherited service and resolved an application deadlock.
- Built and maintained **developer tooling** for project onboarding and daily workflows, including project-setup automation, internal Homebrew packages, and automated SSH proxy configuration.
- Contributed to CI/CD platform engineering as part of a **two-person team**, expanding Terraform, Terragrunt, Ansible, and Packer usage, migrating around **400 Jenkins jobs** to Job DSL, and adding configuration drift detection.
- Improved CI pipeline performance and cost efficiency as test and asset workloads grew: reduced average runtime by **20%+ in some periods** (15.5 to 12 minutes in one example), benchmarked EC2/EBS options, cleaned up unused resources, and migrated runners from **x86_64 / Amazon Linux 2 to ARM / Ubuntu**.
- **Tech stack:** AWS, Jenkins, Terraform, Terragrunt, Ansible, Packer, Bash, Ruby, Prometheus, Grafana; product stack supported: Ruby on Rails, React.

Equinix

Warsaw

DevOps Engineer

Nov. 2020 – Jul. 2022

- Built automation to streamline project setup and CI/CD pipeline creation; maintained the **Jenkins Shared Library** and internal **GitHub Actions**.
- Deployed and monitored self-hosted runners on Kubernetes managed with Rancher; contributed to the company-wide Jenkins-to-GitHub Actions migration by coordinating communication and task priorities.
- Documented shared workflows; the repository became the most-starred in the GitHub organization.
- **Tech stack: Terraform, Terragrunt, AWS, Kubernetes, Java, Python, Argo CD**

Lingaro

Warsaw

Backend Developer / Data Engineer

Mar. 2019 – Jul. 2020

- Developed a **Smart City** data-collection MVP and connectors to Google AdWords and Facebook Marketing APIs.
- Implemented **ETL pipelines** for processing data used in training **machine learning models**.
- Setup and managed **Azure** resources.
- **Tech stack: Java, Kubernetes, Azure, MS SQL Server, Python, Spark, Hadoop**

Freelance

Warsaw

Backend Developer / Product Owner

Oct. 2018 – Jan. 2019

- Served as Product Owner in a **four-person team** delivering and supporting a production-ready truck GPS tracking product for a **30-person company**; defined use cases, coordinated stakeholders and providers, and managed delivery.
- **Tech stack: Go, DynamoDB, AWS**

TUiR Warta S.A.

Warsaw

Java Developer

Jun. 2018 – Sep. 2018

- Developed an application to process faulty insurance transactions and generate reports, reducing tester workload.
- **Tech stack: Java, VBA**
